KIRKLAND NURSERY COMPANY

Dear Friends:

It is a pleasure to again offer to our many rose friends what we sincerely believe to be the finest and most comprehensive selection of the World's outstanding rose varieties. The descriptions are entirely our own, and every effort has been made to report their performance accurately and truthfully, just as we have observed each variety.

You will find a few of the older favorites have been discontinued this year, while a number of new and exciting roses of superior beauty and quality have been added. Rose breeding has progressed so rapidly in the past decade that this change was inevitable. The colors of the new roses of today are brighter, the flowers have better form, the plants are more vigorous and productive, and highly disease resistant, so it is only natural that they should replace some of the old timers.

We number among our friends and customers, many of the leading Rosarians of the Intermountain states, who have exclusively planted OUR roses for many years. If you are interested in quality, and plants that will give you many years of satisfaction and performance, we sincerely request that you give our roses a trial.

Gratefully yours,

The Kirkland Nursery Co.

SPRING PLANTING IS BEST FOR ROSES

Most of the rose experts in this country, those who really know roses, agree that better results are obtained from Spring planting. We are continually receiving letters and comments from many pleased customers who have realized for the first time the great advantages of planting their roses in the Spring rather than in the Fall. Why worry about providing Winter protection for new plants when you can achieve better results by planting our big husky top grade bushes in the Spring.

They are extra heavy because they have been growing vigorously for 3 months longer than roses offered for Fall planting. A short time after you set them out they will burst into glorious fragrant bloom. The following Winter the problem of protection becomes much simpler because the plants are fully established. Roses for Fall planting must be dug while still in foliage, and the wood is very naturally soft and unripened and these Fall planted bushes suffer severe Winter damage and are often killed entirely in colder sections.

Hence, we strongly urge you to buy and plant your new bushes in the Spring, and as early as it is possible to work the ground.
